

MODELS 520 • 520S

FEATURES

Model 520—Standard and Model 520S—Insulated

These high-quality 20 gauge heavy-duty doors are designed for most commercial and industrial applications—providing long service under demanding applications.

Rust-proof

Rollers are galvanized inside and out to inhibit rust. Non-slipped polyurethane steel is coated with primer and painted with overhauled polyurethane top coat to provide the most rust-resistant steel door available. For your warranty options, see details.

Ribbed Panel Design

- 2" thick vertical steel ribbed door
- Full 20 gauge heavy-duty steel doors are hot-dipped galvanized, coated inside and out with an epoxy primer and finished with a baked-on white or brown polyurethane top coat for maintenance-free performance
- Available non-insulated (520) or insulated (520S) with environmentally safe expanded polystyrene installed to the interior with a 30 gauge prepainted steel backdoor
- Durable rust-proofing L-Loc® construction eliminates rust and welds
- Many optional window and track configurations available
